Dear Thomas:

Per request of Mark Granovetter, I am sending you the tape and the code book for the Korean 1973 survey of 25 villages.

The tape is actually the original tape sent from Everett Rogers in 1978 (see the attached original correspondence). I do not know whether you will be able to get it read in after all this time. Good luck on that !

The code book is somewhat cryptic at places. For example, on the second page of Deck 5, there is a note: "\* Attention ! Somewhat wrong - Chung - ". Mark Granovetter had written Chung several times, and has still not received a response to date. Even where the code book seems clear, the data on the file may in fact not be in agreement. I recall having to "clean" the data first, but I no longer have the details now. First of all, you should check for legal values. You may be able to make some corrections (I seem to remember that one field on one record was missing, so that everything else further on was shifted leftwards.). Next, you should check for logical consistency. You may find that someone is married before she was born. Finally, you should note that, according to the original study, the data from Village 12 should be dropped.

Since there are no other copies of the tape nor code book, please make copies and send them back. If you have any questions, you can contact Mark or myself. My telephone number is (212) 254-1550.

Dear Mark:

Here is the codebook for the Korea 1973 survey of the 25 villages. We will copy the computer tape, and mail it to you with all the details this week.

Let me know if you have questions.
