Notas Adicionales

- El "Identificador Codebook" se refiere al número de Deck y la(s) columna(s) como aparecen en las imágenes del codebook original.

- La columna "Nombre en kfamily" indica el nombre de la variable correspondiente en el dataset kfamily de netdiffuseR. Un guion (-) indica que no se encontró una correspondencia directa clara o que la variable del codebook parece no estar presente con ese nombre en kfamily.

- La columna "Descripción (Codebook)" es una transcripción o interpretación de la descripción de la variable en el codebook original.

- La columna "Descripción (kfamily - netdiffuseR)" se basa en la salida de attr(kfamily, "var.labels") y attr(kfamily, "label.table").

- **Variables de Identificación**: Las variables como recnoX, studnoX, areaX, idX se repiten en el codebook para cada Deck. En kfamily, generalmente se les asigna un sufijo numérico (ej., recno1, id1 para el Deck 1; recno2, id2 para el Deck 2, etc.). Las variables village e id en kfamily parecen ser los identificadores globales principales.

- **Ambigüedades en el Codebook**: En algunos casos, el codebook tiene anotaciones o estructuras que podrían interpretarse de varias maneras (e.g., la numeración de columnas para grupos de edad de hombres/mujeres al inicio del Deck 1). Se ha intentado la interpretación más probable.

- **Variables Derivadas**: Es probable que variables como toa (Time of Adoption) y ado en kfamily sean calculadas o derivadas de variables más granulares presentes en el codebook original (como las fechas de inicio/fin de periodos o la serie longitudinal de estatus de PF).

- **Etiquetas Repetidas en kfamily**: Se observó que para las variables net42 a net45, la etiqueta en kfamily es la misma ("Information provided on FP by 1"), lo cual es probablemente un error en las etiquetas de kfamily ya que el codebook las diferencia por persona (person 2, 3, 4, 5). Similarmente para rhealth2 a rhealth5.

- **Variables Vacías en kfamily**: Las variables ado1, ado2, ado3 en la lista de names(kfamily) tienen etiquetas vacías en attr(kfamily, "var.labels"). No se encontró correspondencia en el codebook.
